

MITSUBA

RED-POWER NEW DESIGNED SCOOTER BELT

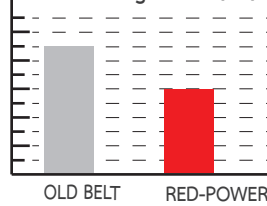

THE NEW MITSUBA RED POWER IS ONE of the best performing scooter belt in the market. The innovative design opens up new scope in designing frictional power in variable speed drive.

Power Transmission (%)

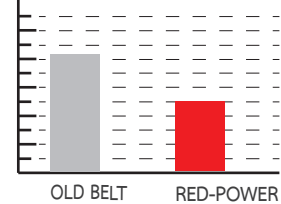

Belt sidewall has better grip to the pulley result in better power transmission in higher speed. The better grip, the better power transmission drive.

Belt Elongation (%)

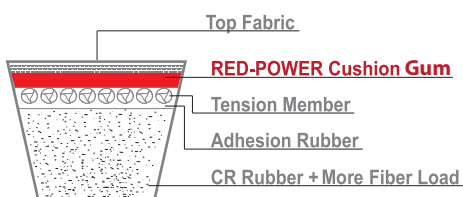

The elongation of the belt creat the belt slip and loss in power transmission. The less elongation, the greater pulley contact, result in higher power transmission.

Belt Deterioration (%)

The deterioration of the belt results in the shortening of the belt working life. The less deterioration, the longer belt life.

Red Cushion gum

Special attributes

- Oil & Heat resistant
- Minimal deterioration
- Better grip to the pulley
- Less elongation, Longer belt life
- Higher power transmission drive in highest speed
- Temperature resistant from -20C to 100C
